

humimeter LogMemorizer with USB data interface

recording - analysing - administration

Your benefits:

- Storage and viewing
- Recognition of already saved logs
- Direct analysis of measuring values in the programme
- Optimal documentation of quality
- Special MS Excel export function
- simple operation

humimeter LogMemorizer

- Database-driven system
- Comprehensive filter function
- data export connection
- diagram functions
- Menu languages: English, German, Italian, French and Spanish

The relative equilibrium moisture content and the absolute moisture of material

The relative equilibrium moisture content of a material indicates the relative moisture of ambient air counterbalancing the material. In this case the material does not absorb or release any moisture.

The absolute moisture of material indicates the percentage of water content of a material referred to its total weight (paper, grain,...) and with some materials (e.g. wood) referred to its dry mass.

Almost all materials in our surroundings are hygroscopic. This means that they soak up moisture from the surroundings or set moisture free.

To avoid very costly mistakes due to incorrect moisture levels it is necessary to check the moisture of a material in the manufacturing and treatment process in order to be able to take suitable measures in time.

Due to its longstanding experience in this field and constant research, **Messtechnik Schaller GmbH** has attained the **highest quality** in the development and production of air humidity and material moisture meters for **professional applications**.

Our main areas are: **climate, environment, food, bioenergy, buildings, paper, board** and **various other materials**.

More than 40 000 customer-specific solutions have been designed and produced for industry, universities and research institutions all over the world so far.

Our technicians provide reliable support and are available to answer your questions.

technical data:

humimeter LogMemorizer

with USB data interface module

Recording - analysing - administration

article no. 12278

- Database-driven system
- Storage and viewing of logs – in chart or diagramme form
- Recognition of already saved logs during import
- Direct analysis of logs in the programme
- Data export
- Special MS Excel export function
- Consolidation of logs
- Modification of additional data of logs
- Diagramme print without need to export
- Comprehensive filter functions
- Multi-lingual: ENG, GER, FRE, ITA, SPA

Know-how obtained through decades of research and development
