AQM & CEM Data Management OPSIS EnviMan Cloud

The handling of monitoring data can be time-consuming and costly, due to maintaining data servers, storage disks, firewalls, IT department restrictions, backups, etc.

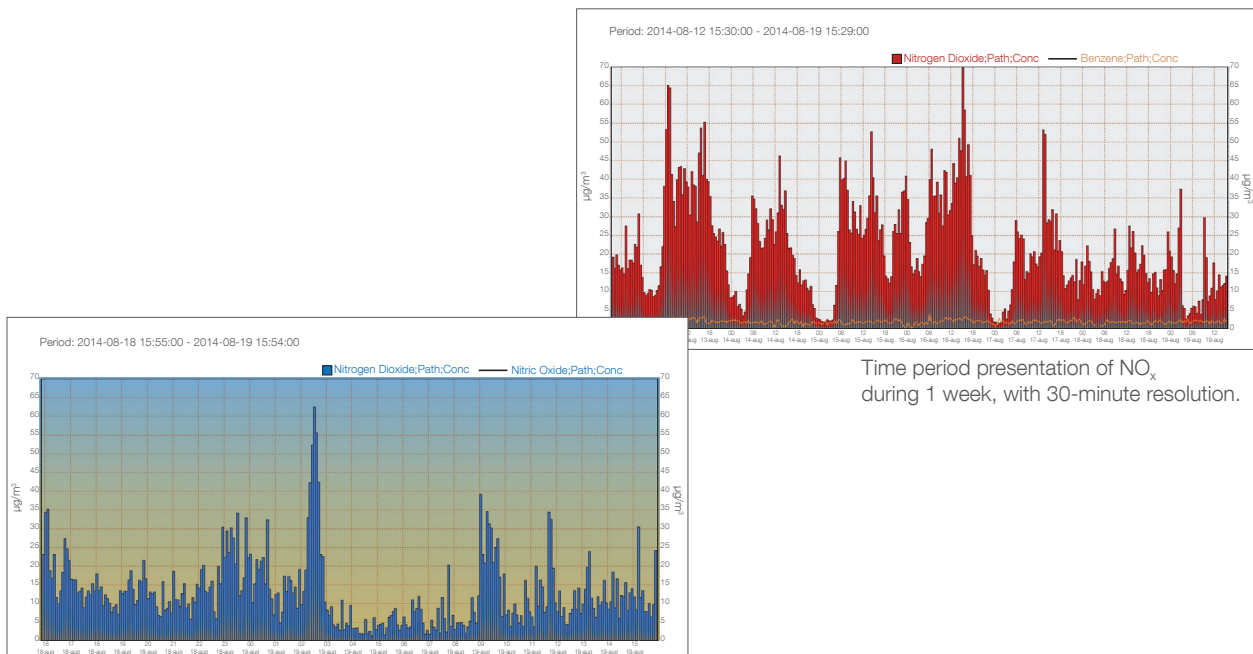

OPSIS EnviMan Cloud (OEMC) allows the user to access, analyze, and protect data, without having to care about maintenance or hardware upgrades. Instead, the customer can focus on the data.

With OPSIS EnviMan Cloud, data is sent from the monitoring station to the OPSIS EnviMan Cloud using the WT256 Web Transfer.

All data is stored on OPSIS servers.

Data is handled, and can be validated, in the OPSIS EnviMan Cloud.

Predefined graphs and reports can be produced in the OPSIS EnviMan Cloud, and accessible to the customer.

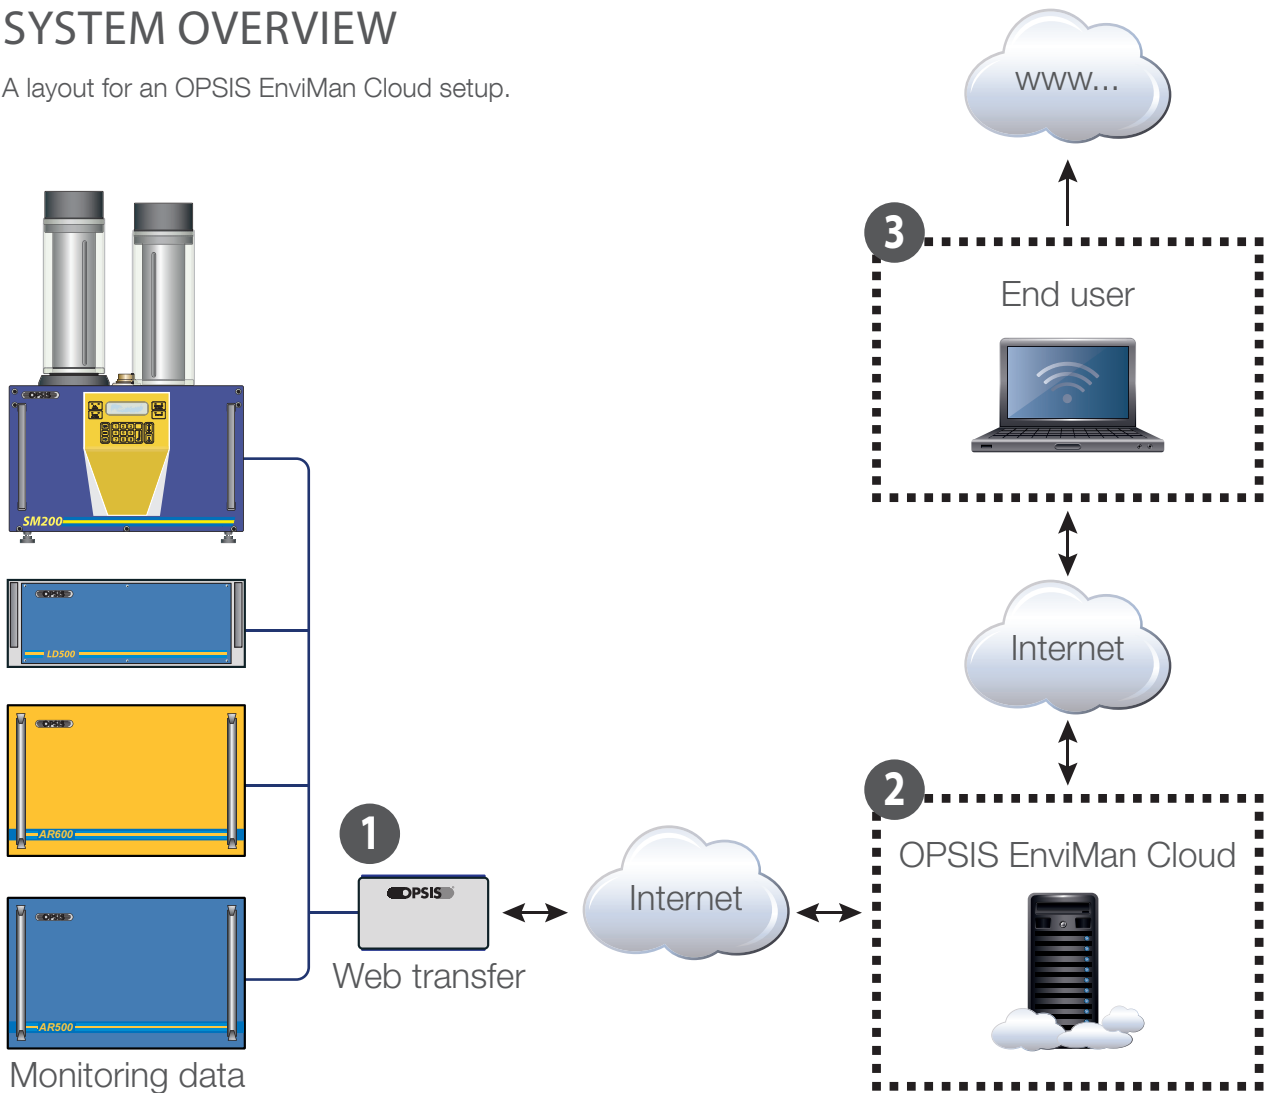

Time period presentation of NO_x during 1 week, with 30-minute resolution.

Time period presentation of NO_x during 24 hours, with 5-minute resolution.

SYSTEM OVERVIEW

A layout for an OPSIS EnviMan Cloud setup.

- 1** Data is downloaded from monitoring instruments to the web transfer, which further transfers the data to OPSIS EnviMan Cloud (OEMC).
- 2** Data handling. Graphs and reports are processed.
- 3** Data is presented in real time.

OP SIS EnviMan Cloud (OEMC) offers the user an easy way to access, protect, and store data.

Data Management

by OPSIS

Cost for data transfer is minimized by using the Internet

Easy to access, protect and handle monitoring data

Reports and graphs, ready to be imported in presentations and on web sites

Runs on a yearly service fee. No investments are required

No involvement for the IT department
